Education

Stony Brook University

Aug. 2021 – May 2025

B.S. in Computer Science (Specialization in Artificial Intelligence)

Stony Brook, NY

- **Achievements:** GPA: 3.70 | Magna Cum Laude | Dean's List (8x)
- **Extracurriculars:** Co-Founder & VP of Web Development Club | Captain of Intramural Basketball Team

Experience

West Palm Test Prep

Remote

Software Development Engineer II

Jun. 2025 – Present

- Rebuilt a **300,000+ line** monolith into **domain-driven** modules with **2** other engineers in under **4 months**, sharing one ubiquitous language with the business, using **Claude Code** for large-scale refactoring.
- Engineered the codebase to support **AI coding agents**, writing the **guardrail documentation** and **Claude Skills** that let them navigate and make large changes safely, with automated checks that block violations.
- Led **2** engineers in building an **AI content generation pipeline** that authors questions for **any exam**, producing **75,000+ questions** in **2 months**, saving nearly **\$296,000** versus human authoring.
- Designed the **frontend SDK** by abstracting each part of the frontend into its own layer, from the branding styles through the **React** components to the stores, so any client can build on any layer.

West Palm Test Prep

Remote

Software Development Engineer Intern

Jan. 2024 – Jun. 2025

- Launched whiz.study as a founding engineer, growing the AI-powered EdTech platform from zero to **100,000+ users** across iOS and web, maintaining the **TypeScript** business logic and **PostgreSQL** queries carrying that traffic.
- Owned the platform's **top subscription driver**, an **agentic AI tutor** reading a question's content and additional tools provided like a calculator or reference sheet to walk students through the problem in words and on-screen cues.
- Built payment infrastructure covering **Stripe** subscriptions, one-time payments, and a custom **free-trial entitlement system**, processing **1,600+ active paid subscriptions** across the platform.
- Developed a **multi-tenant B2B** service in the same **monorepo** where organizations manage members under **role-based access control**, run classes, enroll students, assign homework, and track activity on the main platform.

Projects

Iron Coach | *Java, Spring Boot, PostgreSQL, SwiftUI*

2026

- Created a **weight training app** that logs every set from a **150+ exercise catalog** and tracks **each lift over time**, showing exactly which movements are getting stronger and which have stalled.
- Architected an **agentic AI coach** that turns a fitness goal into a **full workout plan**, laying out every set down to the rep, grounded through **RAG** in training research and the user's own workout history.
- Implemented **mid-workout suggestions** to maximize the next set's value toward the user's stated goal, weighing **recent sessions** of that lift against the set just logged.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C, SQL

AI & ML: OpenRouter, RAG, pgvector, Hugging Face, LangChain, TensorFlow, scikit-learn

Frameworks & Libraries: Next.js, React, Zustand, Tailwind, Node.js, Express.js, React Native, Spring Boot, SwiftUI

Data & Storage: PostgreSQL, Drizzle, Prisma, Supabase, MongoDB, Redis

Platforms & Tools: Vercel, Docker, Turborepo, Claude Code, Codex, Stripe, Clerk, AWS (EC2, S3, RDS, Lambda)
