Education

Stony Brook University

Aug. 2021 – May 2025

B.S. in Computer Science

Stony Brook, NY

- **Specialization:** Artificial Intelligence & Machine Learning
- **Achievements:** GPA: 3.70 | Magna Cum Laude | Dean's List (8x)
- **Extracurriculars:** Founder & VP of Web Development Club | Captain of Intramural Basketball Team

Experience

West Palm Test Prep

Jan. 2024 – Present

Software Engineer (Intern → Full-Time, Jun. 2025)

West Palm Beach, FL

- Launched whiz.study, an AI-powered EdTech platform serving **100,000+** users across web and iOS, owning full-stack development in a **TypeScript** monorepo (**Next.js**, **React Native**, **Express**, **PostgreSQL**).
- Rebuilt the platform's **300,000+** line monolith into a domain-driven architecture with a **3-engineer team** in under **4 months**, using **Claude Code** for large-scale refactoring.
- Led a team of **3 engineers** to ship an **agentic AI tutor** driving **~80% of paid subscriptions**, guiding students through problems by graphing equations, eliminating answer choices, and surfacing reference material.
- Built payment infrastructure spanning **Stripe** subscriptions, one-time payments, and a custom **free-trial entitlement system**, processing **1,600+** active paid subscriptions.
- Shipped Question Bank, a targeted practice product for drilling specific concepts and question types, built on shared abstractions and a **20-member contract** scaffolded across **41 exam modules**.
- Engineered the codebase for agentic development, authoring architecture heuristics, extension checklists, and **CI-enforced architectural rules** that enable AI coding agents to make large changes safely.

Projects

Retirement Planning Simulator | *TypeScript, Bun, Next.js, PostgreSQL*

Spring 2025

- Built a **Monte Carlo** retirement simulator spawning a parallel **Bun worker per path**, simulating **40–60 year** horizons through a 10-stage annual pipeline into year-by-year **success-probability** projections.
- Implemented financial algorithms including **Roth conversion** bracket-fill optimization, **Required Minimum Distribution** calculations, and ordered asset liquidation across **3 account types**.
- Automated IRS data ingestion with **Puppeteer** scrapers across **4 IRS sources** (tax brackets, deductions, capital gains, RMD tables), persisting year-stamped records to PostgreSQL.

RAG Hallucination Benchmarking | *Python, OpenAI API, Pinecone*

Fall 2024

- Developed an end-to-end **RAG pipeline** using **OpenAI text-embedding-3-large** embeddings and **Pinecone** vector search, grounding **GPT-4o-mini** responses in retrieved reference material.
- Benchmarked **zero-shot**, **few-shot**, and **chain-of-thought** prompting across **1,000+** **GPT-4o-mini** and **GPT-4o** responses, scoring factual consistency via **cosine similarity** against reference embeddings.
- Found retrieval grounding improved factual consistency across question types, with **chain-of-thought** prompting driving the largest gains on reasoning-heavy questions and diminishing returns on stronger models.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C, SQL, Bash

AI & ML: OpenAI SDK, OpenRouter, LangChain, RAG, Pinecone, FAISS, HuggingFace, TensorFlow, Sklearn

Frameworks & Libraries: Next.js, React, React Native, Express.js, Node.js, Tailwind, Vitest, NumPy, Pandas

Databases & Infrastructure: PostgreSQL, MongoDB, Redis, Prisma ORM, Supabase, RabbitMQ

Cloud & Developer Tools: AWS, Docker, Git, GitHub Actions, CI/CD, Claude Code, Codex, Jira, Linear
