Education

Stony Brook University

B.S. in Computer Science

Aug. 2021 – May 2025

Stony Brook, NY

- **Specialization:** Artificial Intelligence & Machine Learning
- **Achievements:** GPA: 3.70 | Magna Cum Laude | Dean's List (8x)
- **Extracurriculars:** Founder & VP of Web Development Club | Captain of Intramural Basketball Team

Experience

West Palm Test Prep

Software Engineer

Jan. 2024 – Present

West Palm Beach, FL

- Launched whiz.study, an AI-powered EdTech learning platform serving **80,000+** users, built in a **TurboRepo** monorepo with **Next.js**, **Expo (React Native)**, **Express**, and **PostgreSQL** via **Prisma ORM**.
- Integrated a **Stripe** payment infrastructure including **subscription billing**, **one-time payments**, and a **free trial system** driving **1,600+** active subscriptions and recurring revenue.
- Led a team of engineers in building an **AI tutor** using **OpenAI SDK** and **OpenRouter**, delivering step-by-step walkthroughs, real-time explanations, and tailored feedback that interacts with the student's workspace to guide them through problems.
- Refactored a tightly coupled monolith into a **modular, plugin-based structure** where each exam type is self-contained with its own implementation and architecture, reducing new exam type creation time by **~75%**.
- Expanded the iOS mobile app to support **40+ AP exams**, building new **React Native** views and **Express** backend endpoints to mirror existing web app functionality.
- Constructed a **concept-level knowledge graph (DAG)** to map topic dependencies, powering mastery tracking and personalized study recommendations across the platform.

Stony Brook University

Student Software Developer

Feb. 2025 – May 2025

Stony Brook, NY

- Built an automated web scraping pipeline using **Puppeteer** to extract current IRS tax bracket data across **4 tax categories**, parsing bracket rules across multiple filing statuses and persisting year-stamped records to **PostgreSQL**.
- Engineered a **Monte Carlo** simulation engine with parallel **Bun** workers to model long-term retirement outcomes, processing **48,000+** financial calculations per run including progressive tax computation, investment growth, and withdrawal optimization.
- Implemented financial algorithms including **Roth conversion** tax optimization, **Required Minimum Distribution** calculations, and custom asset liquidation strategies across **3 account types**, enabling users to simulate personalized withdrawal plans.

Stony Brook University

Student Machine Learning Researcher

Sep. 2024 – Dec. 2024

Stony Brook, NY

- Developed an end-to-end **RAG pipeline** using **OpenAI text-embedding-3-large** embeddings and **Pinecone** vector search, reducing **GPT-4o-mini** hallucination.
- Benchmarked **zero-shot**, **few-shot**, and **chain-of-thought** prompting across **1,000+** **GPT-4o-mini** and **GPT-4o** responses, scoring factual consistency via **cosine similarity** against reference embeddings.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C, OCaml, SQL, Ruby, Bash, HTML, CSS

AI & ML: OpenAI SDK, OpenRouter, LangChain, RAG, FAISS, HuggingFace, TensorFlow, Sklearn

Frameworks & Libraries: Next.js, React.js, React Native, Express.js, Node.js, Tailwind, REST APIs, NumPy, Pandas

Databases: PostgreSQL, MongoDB, Redis, Prisma ORM, Supabase, RabbitMQ

Cloud & DevOps: AWS, Docker, Git, CI/CD, Jira, Linear
